## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 12, 14-37 and 69-86 allowed.
2. Claims 52, 54 and 58-68 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

### ***Claim Rejections - 35 USC § 103***

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 50, 51, 53, and 55-57 rejected under 35 U.S.C. 103(a) as being unpatentable over Chapman et al. (4,849,313) in view of Mitome et al. (5,695,897).

Regarding Claims 50, 51, 53 and 55-57, Chapman et al. disclose a method for making a reticle mask where in Fig. 4, four die opaquing regions and support area surrounding the four opaquing regions are disclosed. Alignment marks 22a-22p are disclosed on the support areas and around the four product die opaquing region corners. Claim 1 of Chapman et al. disclose the method of making such mask with product regions and support regions with alignment marks. Chapman et al. fail to disclose the formation of the alignment marks in the sequential manner. However, Mitome et al. disclose an alignment method and semiconductor exposure method where in claims 1, 3, 7 and 10, alignment marks are defined/formed sequentially

Art Unit: 2826

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required sequential alignment formation/definition method in Chapman et al. as taught by Mitome et al. in order to manufacture semiconductor dies in a more reliable and fast manner.
